

Self-service reporting for HP Project and Portfolio Management

Part of the Westbury SMI Suite

SMI Project and Portfolio Management (SMI PPM) is the operational reporting solution for HP Project and Portfolio Management (HP PPM), putting the power of reporting about the performance of your portfolio, projects and processes in the hands of the people who need the data; end users, process owners and managers.

Self-service means that the people who need the information can create their own reports, quickly and easily, with no technical knowledge required. They can simply drag and drop the relevant data into their reports, and create charts and graphs intuitively. Publishing and distributing the reports automatically is a breeze; updated reports can be automatically delivered at regular intervals with no user intervention needed.

Eliminate the middleman

Having a dedicated BI team or technology-neutral report writer might seem like an efficient solution, but it adds an unnecessary level of complexity to reporting - which in turn

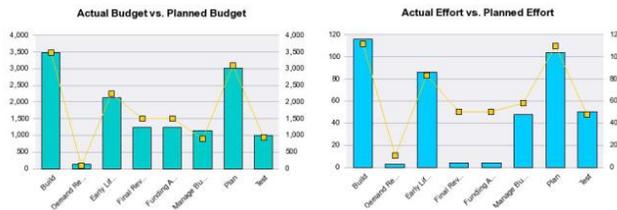

increases costs and drastically slows you down, making your process improvement initiatives much less dynamic and able to adapt to the fast pace of change in IT.

A specialist report writer will have to translate your functional requirements into a set of technical requirements, before figuring out how to extract that data from the PPM database. If anything is lost in translation, you won't necessarily know until the finished report comes back, which means rectifying the mistake will almost be like starting over. With SMI PPM you're not only able to create those reports yourself, but all the data objects available to you use the same names as you see in the HP PPM front end.

Why SMI PPM?

SMI PPM is designed for quick, simple and affordable deployment in companies of all sizes. Meeting your operational reporting needs, the solution offers:

- Self- service reporting capabilities that shield the process oriented reporting users from the technical back end database
- Preconfigured content and startup reports to help you get exactly the functionality you expect, accelerating time to value.
- Clearly priced and scoped implementation services - measured in just days or weeks - for maximum predictability and minimum risk

Project Health Status				Project Overview			
Plan	Complete	Issue	Effort	Costs	Duration	Start	End
Plan	Complete	Issue	Effort = 24 hours	Costs = 2,452.00 USD	Duration = 4 (days)		

#	Task Name	Task Status	Planned Start	Planned End	Planned Duration (Days)	Planned Effort (Hours)	Actual Start	Actual End	Actual Duration (Days)	Actual Effort (Hours)	% Complete

About Westbury

Founded in 1998, Westbury is a leading provider of operational reporting solutions for IT Organizations and represents enterprise customers around the globe.

The company pioneered the principle of Service Management Intelligence, which puts the power of self-service reporting in the hands of process owners, IT managers, decision-makers, and those that need it most.

Its SMI Suite is an integrated ITSM reporting platform that transforms data into meaningful information and improves processes and performance.

Recently the company expanded its global footprint into Asia Pacific, in addition to the US and EMEA. Westbury is privately held with offices in Boston, MA and Amsterdam, The Netherlands.
