6 Ways to make Performance Analytics easier than ever before

All in One Place.
Here. Now.

IT executives buy in on the business value provided by analytics and PA; however, being able to quickly demonstrate a PA implementation path with defined outcomes, timeframes and cost, along with ongoing maintenance and governance programs has typically been a major challenge. Westbury's proven approach to PA eliminates these problems.

Discover how you can avoid the challenges to deploy a valuable PA program in your organization.

Guarantee trustworthy, high quality dashboard data

More people in your organization are creating and modifying dashboards. This places at risk the trustworthiness of your data. You want to make sure that your dashboards' quality is guaranteed so people trust the data.

PA Accelerator offers best practices checks to verify the quality of your dashboards and your data. Use quality control mechanisms to prevent errors, enhance efficiency and promote dashboard standards.

Control content growth to maintain a clean PA environment

Most PA admins lack the controls to manage content growth and to keep their PA environment clean and healthy. This leads to a "cluttered" environment that is difficult to maintain properly. You want to be in control of your PA environment to best serve your users, with validated, high quality content elements. PA Accelerator offers checks and insights related to the growth of PA content within your environment. To maintain a clear and healthy environment, it allows you to quickly act on discovered orphaned content and duplicates.
3 Keep track and act on dashboard usage and adoption

Maintaining and optimizing dashboards and content Managers need insights to determine usage and adoption statistics on their dashboards. Managers want to know that other individuals are using the same dashboard data to evaluate performance and implement improvement strategies. PA Accelerator provides full insight in dashboard usage and adoption statistics to show how much and when a dashboard is being used by others. Employing usage and adoption controls, you become aware to what extent others are using the same dashboard data to evaluate situations and to start improving.

4 Accelerate dashboard development

With limited resources available, it is challenging to satisfy the increasing organizational demand for development of high-quality dashboards in a timely manner. You want to ensure your business can rely on quick, high quality delivery of requested dashboards. Saving valuable time and ensuring quality of your work, PA Accelerator offers tools and checks to quickly develop, re-use and validate dashboard elements. Utilize PA Accelerator to shorten dashboard development cycles and respond quicker to the needs of your business. Take advantage of validation tools and checks to build high quality dashboards with less resources.

5 Automate dashboard acceptance and deployment tasks

Getting a newly developed dashboard accepted for deployment in production is often a time-consuming process, frustrating involved business owners. You want to ensure your dashboard acceptance procedures are agile and efficient, allowing for quick deployment in production. Streamlining and simplifying testing and acceptance procedures, PA Accelerator offers automated tools to validate quality of dashboard elements and to indicate data trustworthiness. Shorten dashboard quality testing and acceptance procedures. Reduce the timeframe for your business to gain access to dashboards and start improving.

6 Simplify PA maintenance and optimization tasks

Maintaining and optimizing dashboards and content elements are often time-consuming and complex tasks, independent from the type of modification you would like to apply. You want to increase efficiency in maintaining and optimizing dashboards in order to save valuable time and resources. PA Accelerator offers a set of smart tools to save time when optimizing dashboard content, allowing modification of multiple elements in one go. Using less resources, safe significant time when performing PA maintenance tasks. Reduction of complexity allows for smooth knowledge transition between administrators.

ABOUT WESTBURY

Founded in 1998, Westbury Analytics is a ServiceNow partner dedicated to Performance Analytics professional services. We provide full lifecycle services for PA including dashboard design & implementation and PA maintenance services staffed by knowledgeable PA-certified consultants and 10+ years of reporting and analytics experience.
